

## PART B — PROTOTYPE DEMO (~3–3.5 minutes) — *dibawakan oleh Arrafi*

### 1 Donor Flow & Nutrition Profiling (~45 seconds)

📍 Route: <http://localhost:5173/donor>

👉 Action: Click "Add Surplus Donation" → select the "Complete Rice & Side Dish Package" preset → show the auto-filled nutrition form (50 portions, 26g protein, 4-hour shelf life) → click "Publish Donation"

#### Narration:

"Thank you, Ayli. Let me walk you through the prototype. This is the donor dashboard — for example, hotel banquet staff or partner restaurants. Donors simply select a smart preset, and the system automatically fills in portion count, protein content, and safe consumption window. Once the Publish button is pressed, this data is not thrown into an open public board — it's immediately processed by our decision engine."

---

### 2 Core Highlight: Hybrid Entropy-TOPSIS Audit (~90 seconds) — *the most critical segment*

📍 Route: </donor> → "TOPSIS Recommendation Audit" (or </admin>)

👉 Action: Open the audit modal, show the weighted decision matrix, the 5 criteria (Protein, Urgency, Shelf Life, Distance, Fairness), the Shannon Entropy weights, and the preference scores ( $V_i$ )

#### Narration:

"This is the heart of NutriShare. Shannon Entropy calculates criteria weights objectively from real data variance, then TOPSIS measures each shelter's distance from the ideal positive and negative solutions.

As shown on screen, Kasih Ibu Orphanage ranks #1 with a preference score of 0.892 — because it has a high protein deficit, vulnerable infants, is nearby (3.2 km), and hasn't received aid in the past week. This isn't a coincidence — it's data-driven nutritional equity."

---

### 3 Recipient Dashboard & Priority Claim (~45 seconds)

📍 Route: </recipient>

👉 Action: Show the AKG gauge widget, real-time notification (SSE), claim countdown timer → click "Claim Donation"

#### Narration:

"On the recipient side, the #1 ranked shelter receives an exclusive real-time alert via Server-Sent Events. There's a priority response window — if unclaimed, the system automatically escalates the offer to Rank #2 through our Tiered Shelf-Life Escalation feature, so food never goes to waste. I'll claim it now."

---

#### 4 Logistics Tracking & Handover (~30 seconds)

📍 Route: `/recipient` → "Track Delivery"

👉 Action: Open the Leaflet map, simulate arrival, click "Confirm Receipt"

##### **Narration:**

"Once claimed, delivery tracking is displayed in real time via Leaflet Map. When the food arrives, the recipient verifies its physical condition and taps Confirm — closing the loop: the protein received is instantly logged into the system."

---

#### 🔄 Transisi Penutup (dari Arrafi kembali ke Nurul Layli)

*(disampaikan Arrafi setelah demo selesai)*

"That concludes our prototype walkthrough. I'll now hand it back to Ayli for our closing remarks."

*(→ lanjut ke Nurul Layli untuk bagian Conclusion / Slide 5)*

## PART B — PROTOTYPE DEMO (~5–5.5 minutes) — *dibawakan oleh Arrafi*

### 0 Landing Page Walkthrough (~45–50 seconds)

📍 Route: <http://localhost:5173/> (Landing Page)

👉 Action: Scroll berurutan melalui 4 bagian utama — **Hero**, **Cara Kerja**, **Keunggulan**, dan **CTA/Footer**

#### Narration:

"Thank you, Ayli. Let me walk you through the prototype, starting with our landing page.

Here in the **Hero section**, visitors immediately see NutriShare's mission — turning food surplus into nutritional equity, backed by our live impact counter.

Scrolling down to **How It Works**, we break down the journey in simple steps: donors publish surplus food, our engine calculates priority, and recipients claim it — all in real time.

Next is our **Advantages section**, highlighting what sets us apart: the Hybrid Entropy-TOPSIS engine, AKG-based nutrition standards, and closed-loop verification — features no other platform combines.

Finally, the **Call-to-Action and footer** invite donors and institutions to join, along with our SDG commitments and partnership information.

Now, let's go deeper — starting with the donor side."

---

### 1 Donor Flow & Nutrition Profiling (~45 seconds)

📍 Route: <http://localhost:5173/donor>

👉 Action: Click "Add Surplus Donation" → select the "Complete Rice & Side Dish Package" preset → show the auto-filled nutrition form (50 portions, 26g protein, 4-hour shelf life) → click "Publish Donation"

#### Narration:

"This is the donor dashboard — for example, hotel banquet staff or partner restaurants. Donors simply select a smart preset, and the system automatically fills in portion count, protein content, and safe consumption window. Once the Publish button is pressed, this data is not thrown into an open public board — it's immediately processed by our decision engine."

---

### 2 Core Highlight: Hybrid Entropy-TOPSIS Audit (~90 seconds) — *the most critical segment*

📍 Route: </donor> → "TOPSIS Recommendation Audit" (or </admin>)

👉 Action: Open the audit modal, show the weighted decision matrix, the 5 criteria (Protein,

Urgency, Shelf Life, Distance, Fairness), the Shannon Entropy weights, and the preference scores ( $V_i$ )

**Narration:**

"This is the heart of NutriShare. Shannon Entropy calculates criteria weights objectively from real data variance, then TOPSIS measures each shelter's distance from the ideal positive and negative solutions.

As shown on screen, Kasih Ibu Orphanage ranks #1 with a preference score of 0.892 — because it has a high protein deficit, vulnerable infants, is nearby (3.2 km), and hasn't received aid in the past week. This isn't a coincidence — it's data-driven nutritional equity."

---

**3 Recipient Dashboard & Priority Claim (~45 seconds)**

📍 Route: </recipient>

👉 Action: Show the AKG gauge widget, real-time notification (SSE), claim countdown timer → click "Claim Donation"

**Narration:**

"On the recipient side, the #1 ranked shelter receives an exclusive real-time alert via Server-Sent Events. There's a priority response window — if unclaimed, the system automatically escalates the offer to Rank #2 through our Tiered Shelf-Life Escalation feature, so food never goes to waste. I'll claim it now."

---

**4 Logistics Tracking & Handover (~30 seconds)**

📍 Route: </recipient> → "Track Delivery"

👉 Action: Open the Leaflet map, simulate arrival, click "Confirm Receipt"

**Narration:**

"Once claimed, delivery tracking is displayed in real time via Leaflet Map. When the food arrives, the recipient verifies its physical condition and taps Confirm — closing the loop: the protein received is instantly logged into the system."

---

**5 Admin Governance & Macro Analytics (~45 seconds)**

📍 Route: <http://localhost:5173/admin> (Admin Dashboard)

👉 Action: Show the KYC Verification tab, accumulated protein metrics, food saved (kg), and estimated CO2e reduction

**Narration:**

"Finally, platform integrity is governed through the Admin Dashboard. To prevent fraud and food poisoning, every donor and recipient must pass legal and administrative verification through our KYC process."

Beyond that, admins can monitor macro-level impact: total protein delivered and CO2e emissions prevented from food waste — verified data that directly supports SDG 2, Zero Hunger; SDG 3, Good Health; and SDG 12, Responsible Consumption."

---

### **Transisi Penutup (dari Arrafi kembali ke Nurul Layli)**

*(disampaikan Arrafi setelah demo selesai)*

"That concludes our full prototype walkthrough — from the landing page all the way to real-time impact tracking. I'll now hand it back to Ayli for our closing remarks."

*(→ lanjut ke Nurul Layli untuk bagian Conclusion / Slide 5)*
